Complete roster movelist

38 wrestlers. 569 assigned move slots. All nine wrestler move categories, plus the complete 95-entry shared move dictionary.

This is a complete extraction of the supplied build's move assignments. Confirmed controls are included below. Exact inputs for some categories remain unaudited; an assigned move is not presented as a separately verified button command.

Situation	Input / setup	Evidence
Normal ground moves	With Ground-Controls patch: tap RB beside the appropriate part of a grounded opponent. Opponent must be above their low-health threshold.	Banzai confirmed; all-roster patch reported working.
Low-health ground moves	Tap RB with the patch, or B. The game selects this category at/below the opponent's threshold. Match permissions and position can matter.	Same original health rules retained.
Rear moves	Stand behind a STAND_TIRED / standing-dazed opponent, face the same direction, and tap B. The rear list cycles. A instead uses Restrain.	RKO user-confirmed; selection checked in code.
Start running	Hold A+B, or press RB. Inputs for individual running attacks still need a complete audit.	Code-confirmed; RB behavior reported.
Headlock tag attack	Hold the opponent in a headlock near your own corner. When the tag hint/readiness condition is satisfied, press B. Partner must be ready.	User-confirmed; positioning is sensitive.
Front grapples	A or B alternates within slots 1-2. Low opponent grapple resistance, or a special power flag, switches selection to slots 3-4. A vs B does not directly choose a slot.	User confirmed several signature finishers.
Running counters	B selects the first counter entry; A selects the last. Both select the same move when the list has one entry. Timing still matters.	Selection confirmed in Xbox code.
Turnbuckle attacks	Use the situation listed on each wrestler card. Corner approach and attack inputs remain to be documented.	Assignments confirmed from game data.

Patch setup: keep the working DLC patch and 5841123D-Ground-Controls.patch.toml. Remove Move-Trace and Banzai-Test. RB is a ground-action shortcut only; it does not replace every A+B action.

Reading the cards

Move names are expanded from the build's internal labels. [Number] is the move ID used in the dictionary on pages 22-24. These labels may differ from television names.

Head / middle / feet describe the move's ground-position field. A single-entry list can bypass the position filter, so these are not universal prerequisites. Multiple-entry lists usually choose by position.

Normal and low-health ground lists are distinct. The threshold belongs to the opponent; HUD color alone is not a reliable measure. Banzai Drop is in Yokozuna's normal list, whereas People's Elbow and Five Knuckle Shuffle are in low-health lists.

Front-grapple slots are numbered. A/B advances the same selector within 1-2 or 3-4, according to opponent grapple resistance and a special power flag. Counter entries are labeled B/A. Rear B cycles through its list; Orton RKO execution is user-confirmed.

Animal and Hawk both have Tag Elbow Drop. No Doomsday Device entry was found in the shared move/tag tables or explicitly named animation data. A separate hidden code path has not been ruled out.
